

- Family labour.
- Complete infrastructure.
- Sale of dry coffee.
- Access to better prices for quality and certification or verification programmes.
- Commercial chain through the coffee growers' cooperative.

Specialty coffee 5%

Conventional producers 40%

- Family labour.
- Coffee processing infrastructure.
- Sale of dry and/or green coffee.
- Commercial chain through coffee growers' cooperative and intermediaries.

55% TRADITIONAL

- Family labour.
- Deficient infrastructure for coffee processing.
- Sale of dry or green coffee (without drying).
- Commercial chain through intermediaries and cooperatives..

Project Benefit

- Regulation of the water cycle.
- Prevent landslides and soil erosion.
- Forests contribute to the balance of oxygen, carbon dioxide and moisture in the air.

Protection of forests and water bodies

Timely and appropriate combination of different cultivation practices such as mechanical, chemical, manual, trying to maintain soil cover.

Integrated weed management

Soil conservation and improvement activities

Agroforestry

Benefit

- Physical protection of the soil.
- Effect on the microclimate.
- Optimisation of space.

Green fertilisers

Benefits

- Promotes nitrogen fixation in the soil.
- Continuous supply of biomass to the soil.
- Increases the availability of nutrients for plants.
- Improve the microclimate, reduce extreme variations in soil temperature.
